Internship

Machine Learning Intern | Python, Machine Learning **Apr 2024 – Mar 2024**
Corizo.

- Gained practical experience in **data preprocessing**, **model building**, and **model evaluation** through structured training using NumPy, Pandas, and scikit-learn.
- Strengthened machine learning fundamentals through **mentor-led** and self-paced modules, including live doubt-clearing sessions, lifetime access to study materials, and **certified training**.
- Enhanced industry readiness by completing an internship-integrated program offering placement guidance and extended career-focused training.

Projects

Adaptive Facial Recognition System for Real-Time Attendance Monitoring | *Python, SVM* **Nov 2025 - Dec 2025**

- Implemented an end-to-end face recognition pipeline using HOG feature extraction and RBF-kernel SVM, achieving 92% test accuracy while maintaining fast, GPU-free real-time inference.
- Improved robustness to lighting and image quality variations by integrating CLAHE normalization, adaptive face cropping, and outlier removal, reducing noisy samples by 4% and stabilizing model performance
- Designed a unified, reproducible scikit-learn pipeline with feature scaling and ROC-optimized class thresholds, enabling reliable identity verification, high recall, and consistent deployment behaviour.
- Repository Link: **https://github.com/Shindapeedikakandy/Supervised_Face_Recognition_System**

Identification of Genetic Disorder in the Medical Field | *Python, SVM, Tkinter, NumPy, Pandas* **Apr 2025 - Mar 2025**

- Developed an SVM-based image classification model for genetic disorder prediction, achieving 92% accuracy through optimized preprocessing and feature extraction.
- Applied SMOTE to rebalance the dataset, reducing majority-class bias by 40%+ and improving minority-class recall by 25%.
- Built a fast, user-friendly GUI for real-time predictions (under 2 seconds per image) using a clean, modular architecture supporting easy scaling and maintenance.
- Repository Link: **https://github.com/Shindapeedikakandy/Identification-of-Genetical-Disorders**

Certificates / Certifications

Essentials Automation Professional **Dec 2025**
Automation Anywhere — Certificate Link

Python **Oct 2025**
HackerRank — Certificate Link

Skills

Languages Python, Java, C++

Technologies/Frameworks: HTML, CSS, Google Colab, GitHub, Automation Anywhere

Domain Skills: Machine Learning, Problem-Solving, Model Development, Feature Engineering and Model Evaluation

Education

Lovely Professional University **2023 – present**
Bachelor of Technology - Computer Science and Engineering — CGPA: 7.5 *Phagwara, Punjab*

Amrita Vidyalayam **2022 – 2023**
12th — Percentage: 86.40% *Kuthuparamba, Kerala*

Amrita Vidyalayam **2019 – 2020**
10th — Percentage: 92.2% *Kuthuparamba, Kerala*
